

MODULE: *Photosynthesis and Respiration*

Activity Sheet 1.6: Giving your presentation

Remember, you are presenting your team's proposal for how the synthetic leaf might be used in the future of space travel and colonization. This means you will need to convince your audience that you understand the science behind the topic as well as being creative and imaginative.

The Big Day: Checklist

To make sure it all goes smoothly:

Everyone in the team...	
Knows what they are bringing	
Knows what they are doing	
Knows where to be, and when	

The team leader...	
Has a spare copy of the script, just in case	
Has thought of what to do if someone is ill	

Setting up...	
Get there early – get the feel of the room	
Check equipment you asked for is there, and works	
Relax – read 'getting over nerves' again if necessary	

At the end ...	
Learn from your talk - complete the peer review sheets for others, and read the ones relating to your performance.	

Peer review sheet

Peer assessment – which group impressed you most?

When all the groups have done their presentations, write down the name of the groups and then in each box give a mark out of 5 for each section (5 means excellent). Then add up your total scores, and add these to the master sheet at the front of the class.

Group	Was the proposal clearly explained?	Did the group explain the science behind their proposal?	Were you convinced by the group's proposal?	Was the poster clear and well presented?	Total
